
Passive Fire Protection Coatings

Ensure the safety of your people and assets through independent, expert passive fire protection and cryogenic spill coating advice.

Safinah's in-house independent team considers all aspects of passive fire protection (PFP) performance. We can help with specification and product selection ensuring that you meet the certification and project requirements.

Safinah's team brings together engineers and formulating chemists. Our understanding of available technology and standards will help minimize project costs. Safinah's approach will tailor a solution specific to your project, maximising value and minimising risk.

It is not just our experience which helps us deliver, but the broad knowledge we gain by working across other related market sectors. This insight enables us to consider all aspects of coating performance including in-service challenges, application/build, in addition to fire performance.

Safinah's wide range of skill sets and experience will also enable us to help with failure investigation, trouble shooting and repair and maintenance scenarios for your PFP and cryogenic spill protection.

Talk to one of our coatings experts today on +44 1670 519 900 or email the team at enquiries@safinah-group.com
